

EasyMail

Reliable and Feature-Rich Email for Business

Outsource Email Management to a Reliable Source

More and more businesses are outsourcing their business email management to a reliable provider. Why is iSelect Internet's EasyMail the best way for a business to manage its email system? EasyMail saves businesses enormous amounts of time, as well as administrative and technical costs, because it is so easy to manage. And while EasyMail is saving your company money, its powerful yet easy-to-use feature list is making your employees more productive. Every user of your email system, internal and external, will see the difference EasyMail can make.

What is EasyMail?

EasyMail is a fully managed email service that offers superior reliability and features over other email systems. It can also cost a lot less than other systems (including your own) because it does not require in-house systems or support to run it.

EasyMail is more Reliable

EasyMail operates on a clustered server environment that is both fully redundant and monitored 24X365. You won't hear that chilling phrase "email's down!" once you are using EasyMail. EasyMail offers a 99.9% uptime guarantee that is backed by a solid Service Level Agreement (SLA).

EasyMail is Economical

The true costs of running email in a company are higher than you may think. If you do it yourself, there are servers, software, and technical staff to pay for. If you use email from your Internet Service Provider, you may save money, but get a second-class service. The EasyMail solution makes system administration so easy, any non-technical administrator can do it. A low monthly fee gives you big company performance at small company prices.

EasyMail increases productivity

Your users, employees and customers will all see the difference from EasyMail. Powerful and useful features mean you can do things that improve your everyday business. For instance,

100Mb Storage – Store 100Mb of data on each email account.

Web Mail – EasyMail supports POP3, IMAP and Web Mail so your employees can securely access their mail from any location. This enables work-at-home, overtime and traveling employees to be more productive.

Autoresponders – Gives you the ability to notify correspondents of short-term absences. Improve customer service and manage expectations of your communications partners.

SPAM-filtering – Block unsolicited bulk email from your company that ties up servers, degrades your system performance and distracts employees with redundant or offensive messages.

Catch Alls – Set up email addresses that direct multiple mail addresses to a single address. Great for setting up email response queues that can centrally gather *sales@*, *marketing@* and info@yourcompany.com.
