

iSelect Internet offers world-class web hosting, email and e-commerce solutions that can take your business where it needs to go online.

iSelect Internet hosting enables your online business strategy like no other. Our hosting plans deliver both UNIX and Windows-based hosting, seamlessly in the same package. Our 99.9%+ uptime record combined with peerless 24/7 technical support ensures both reliability and response when you need it. Our business-class EasyMail service offers mission-critical reliability and the largest storage limits in the industry for your email folders and attachments—50MB of space!

WebsiteOS™ Your Ultimate Control Panel

Hosting users today demand an ultra-simple user interface that virtually anyone can use. Our WebsiteOS control panel is the world's most powerful application manager and does just that! This windows style, browser-based suite of applications lets you and your key staff control and administer your email, e-commerce, website builders, security, statistics, and more—and you can learn it in minutes! Our WebsiteOS™ Control Panel has many features, including:

Ad Manager

Use your website to increase your revenues with rotating banner advertisements. You can collect statistics on banner views and "click throughs". Statistics are stored in a MySQL database.

Announcer

Announcer is an easy way for you to keep your customers or friends up-to-date with what is new and exciting on your website. With Announcer, you can manage distribution lists of email addresses and send messages based on these lists.

Business Card Website Builder

Create a simple, professional looking single-page website in minutes. No programming knowledge required!

EasyMail Administrator

This function allows you to manage your domain's EasyMail (email) accounts. The EasyMail setup is a full-featured accessory that allows a novice user to easily configure various email account features such as creating and deleting accounts, changing passwords and forwarding email accounts. These accounts can be accessed by traditional mail reading clients or over the web with the WebMail application.

Promote Site

The Promote Site function allows you to promote your site by automatically sending your site information to the major search engines. You can even submit each page on your site separately, which allows you to fine-tune your submission criteria for each page. You'll show up in more searches and make it easier for people to find you!

Site Checker

Site Checker gives your website a check-up. It allows you to view the structure of your site, check your pages for broken links, list links pointing to external sites, view your website images, get a list of problems sorted by the author of the pages, locate pages that may be slow to download, show new and old pages, give pages that have no title and show links that are not checked.

EasySiteWizard

With EasySiteWizard, you can create a completely customized, multi-page website in a few simple steps. There are several professionally designed templates available for you to choose from and you can even upload your own graphics or logos for use in your site. No knowledge of HTML is necessary!

Web Stats

The Website Activity Analyzer is a web server log file analysis program, which produces usage statistics in HTML format. The results are presented in both numerical and graphical a format, which facilitates easy interpretation of the detailed data.
