

Template Gallery

Downloading templates and images from the Advanced Template Manager.

The Advanced Template Manager is located under the Site Builders section in WebsiteOS.

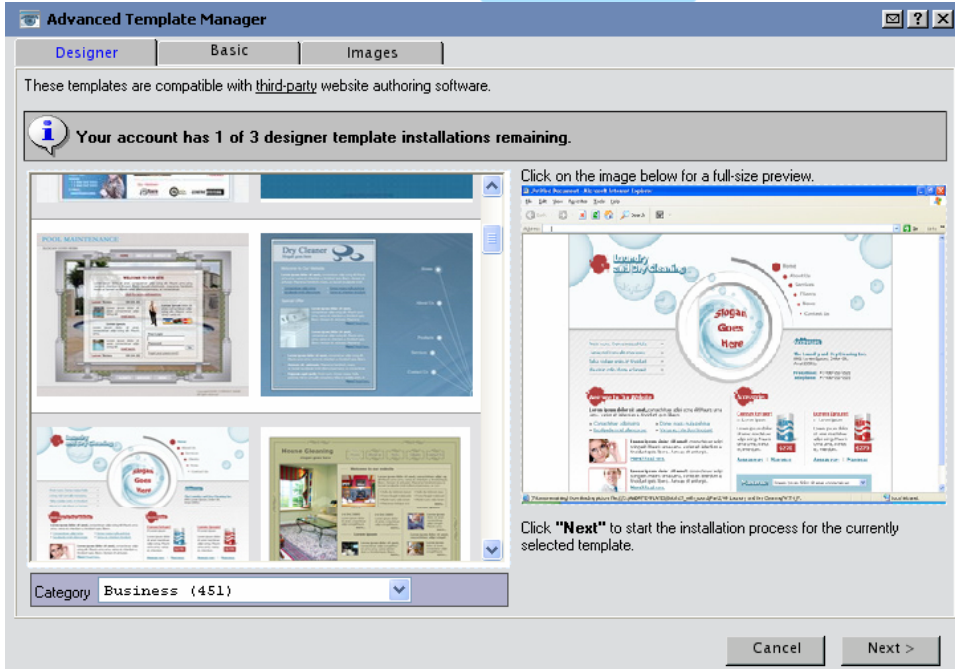

After launching the application, users are provided with three viewing options: Designer Templates, Basic Templates, or Royalty-free Images. A brief description of each option follows:

Designer Templates are highly customizable templates which generally require the website designer to own or have access to graphic editing programs such as Adobe Photoshop, Macromedia Flash MX or Dreamweaver MX. The number of template downloads per customer is limited to three by the interface.

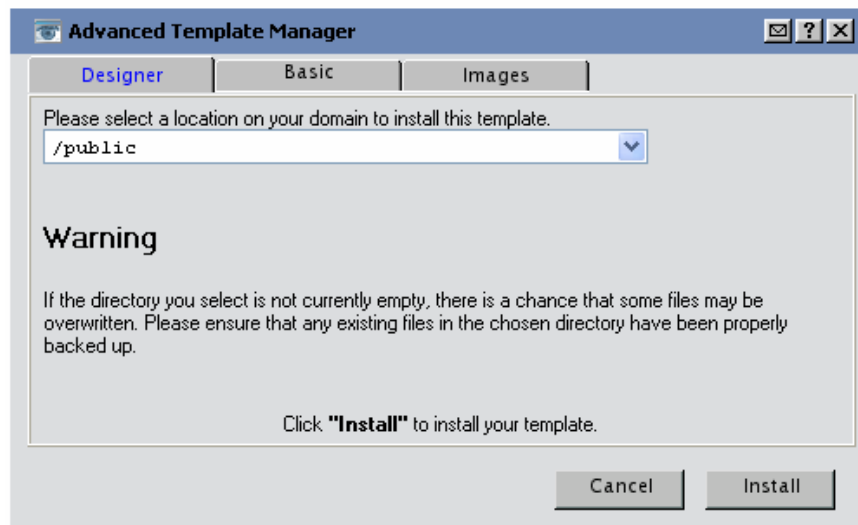

Basic Templates are select EasySiteWizard templates, but are provided in a format which allows a higher level of customization. Again, these templates generally require the website designed to have access to Adobe Photoshop, Macromedia Flash MX and Dreamweaver MX. There are no restrictions on the number of basic templates you can download.

Royalty-free Images are pictures which are free for use online; these pictures are the same ones available through EasySiteWizard, but can be downloaded directly to your website through the interface provided by the Advanced Template Manager.

After browsing the gallery previewing your desired template, click next to download. You will be taken to the download interface.

Your files will be downloaded to a directory on your website. You can select the specific directory by using the drop-down menu provided. Please note that if the directory you select is not currently empty, there is a chance that some of the existing files may be lost. Please ensure beforehand that any existing files in the chosen directory have been properly backed up.

Click "Install" to install your files in the directory you have chosen.

Once you have installed your files, you can use an FTP program to download the template or images to your computer for customization. For information on how to transfer files via FTP, see the General Help section titled "Uploading with FTP."
