

Grow your business with iSelect Internet email!

iSelect Internet offers you a full-featured professional email application to effectively communicate online.

No need to worry about maintaining servers, exceeding your storage limits or working around a branded sub domain. With iSelect Internet email you receive a 100-mb storage mail box with all the functionality you'll ever need to run your business securely and professionally including...

- Email announcer
- Autoresponder
- Global spam filter
- Unlimited catch-all and alias addresses
- POP/IMAP
- Leave mail on server
- Webmail

iSelect Internet email offers all the tools you need to communicate effectively online.

Email Announcer

Keep customers or visitors up-to-date with what's new and exciting on your website.

Autoresponders

Save time and respond quickly to customer inquiries with pre-written messages to all or certain emails sent to an email address. This functionality is particularly useful for out-of-office messages, auto marketing, or support replies based on the content within any given email.

Spam Filtering

Prevent unsolicited email (spam) from reaching your mailbox. Every email you receive is evaluated and assigned a point value by an automated filter based on the message's headers and content. One of three things can be done with email flagged as Spam: "Tag and Deliver", "Delete" or "Quarantine".

Catch-alls

Redirect improperly addressed email messages sent to your domain to an identified catch-all email address.

Aliases

Set up unlimited marketing or department-based mail addresses that automatically forward to an existing individual's account.

IMAP

Access email messages on a remote server without having to download them to a local hard drive. Perfect for professionals who travel and access their email from different systems.

POP Mail

Access email messages while offline by downloading and reading mail on your hard drive.

Webmail

Access your email in real-time while away from your office. Fast and intuitive, Webmail is jam-packed with tools like online calendar, task lists and advanced contact management making it not only a great tool for on the road, but a professional complement to common PC mail management programs.

Key features include:

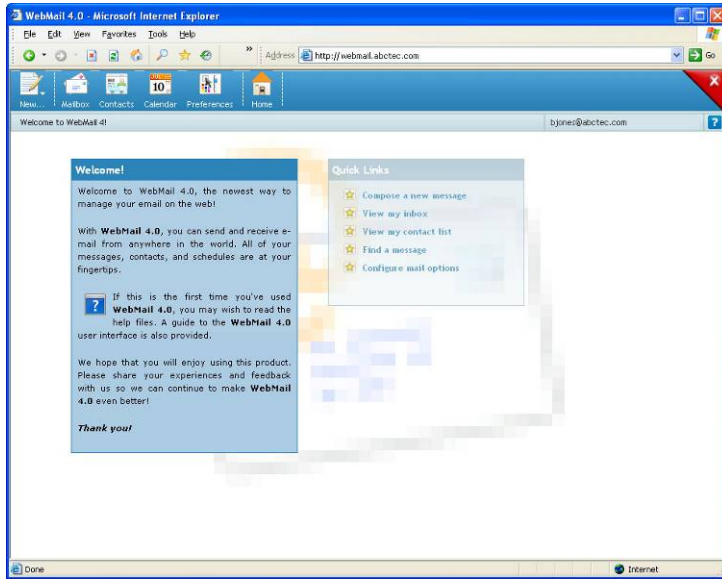

- Easy-to-set preferences
- Configurable spam/virus protection
- Advanced email folder management
- Intuitive calendaring and task management
- Enhanced contact management functionality (including group and list management)
- View quarantined (spam) mail
- Multi-language support and spell checker
- Easy personal preference settings including autoresponders, email forwarding, password management, and variable spam filtering levels

Our Mail Systems

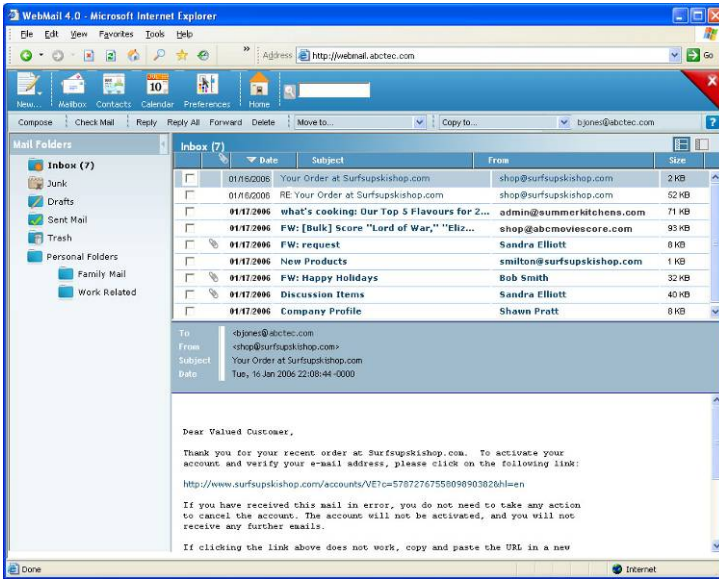

<Company>'s technical platform has a high level of fault-tolerance and system redundancy, allowing it to perform flawlessly even if several hardware components should fail simultaneously. Our use of RAID technology in our storage architecture also ensures that no data is lost. The platform is also capable of withstanding the majority of Denial-of-Service (DOS/DDOS) attacks, with little or no loss in performance.

The platform is monitored 24/7 by our system administration team. In addition to daily system performance audits, we employ several proprietary automated monitoring systems to ensure that our mail system always runs at peak efficiency.

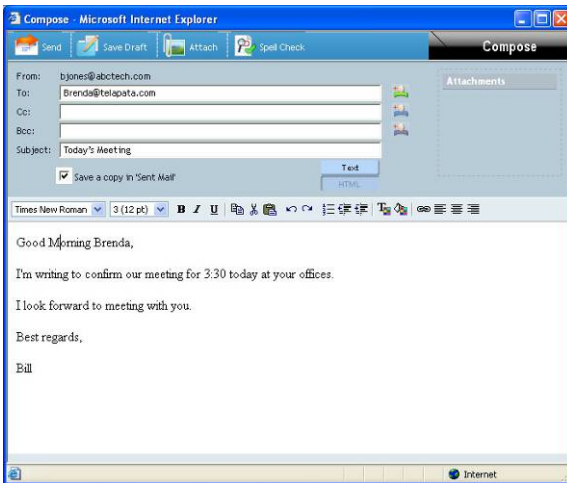

WebMail Welcome Screen:

Message Management:

- Familiar message navigation
- Create personal folders
- Read, reply, forward, delete, sort, file messages and more

- Compose messages
- Address messages by pulling info from the contact lists, or by manual entering destination addresses into the To, Cc, or Bcc fields
- Spell check messages
- Add attachments
- Send messages in text or HTML formats
- Add paragraph and font formatting to HTML messages
- Choose whether to save message to sent items

Managing your Calendar:

The screenshot shows a 'New Event' form with the following details:
